## PART VI WRITING

### SECTION A

When asked whether English majors should study maths, different people have different opinions. In my opinion, maths should be included in courses for English majors.

First of all, the vast majority of people can’t get through a single day without using maths of some sort. English majors are no exception, the language of maths is numbers, not English. If we are well versed in this language of numbers, we can make important decisions and perform everyday tasks successfully. Maths can help us to shop wisely, buy the right insurance, and decorate our home within the budget. As a popular language, English can be a tool for future jobs.

Maths also helps to open the door to relatively well-paid jobs in fields that demand knowledge of maths. As English majors, if we don't learn maths, we turn down the opportunity to predominate in the job market. Secondly, while English can make us eloquent in international communication, maths does help us cultivate a rational way of thinking, which is indispensable to the development of our capacities, Furthermore, studying maths is interesting and enjoyable. It enables us to distinguish right from wrong.

The solution of a problem can bring people excitement and satisfaction.

To sum up, maths is a boon; just imagine the planet without maths! We could have been in the prehistoric age if maths were not discovered. Therefore, it is necessary for English majors to study maths.

## SECTION B NOTE-WRITING

April 19, 2014 Dear Mark, I'm writing to you to ask for your help. John, my former schoolmate, will come to visit me tomorrow morning, but I am going to take an exam at that time. Would it be possible for you to meet him at the railway station? He is a thin and tall boy with a Northeastern accent. I would be most grateful if you could help me.

Yours sincerely, Jim
